(54) Title: IMAGE SENSING OPERATOR INPUT DEVICE**(57) Abstract**

A computer input device (42) detects images on a surface (116). The computer input device (42) generates input information indicative of a change event when the device (42) switches from reading one predetermined pattern to reading another predetermined pattern. The present invention can also be directed to a method of using the input device (42) or printable medium with the predetermined patterns disposed thereon.

A. CLASSIFICATION OF SUBJECT MATTER

IPC 7 G06K11/08 G06K11/18 G06F3/033 G06K11/20

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 G06K G06F

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, PAJ, IBM-TDB

C. DOCUMENTS CONSIDERED TO BE RELEVANT

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

INTERNATIONAL SEARCH REPORT

international application No.
PCT/US 99/30507

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. ☒ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest.

☒ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-8,10-12,16-29,35-37,39

A computer input system (and corresponding method) for providing input information to a computer, the system comprising a computer input device and first and second patterns disposed on a surface, the patterns being respectively adapted, in combination with a controller coupled to a pattern detector, to provide respectively either relative position information indicative of relative movement of the input device or absolute position information indicative of an absolute position of the input device.

2. Claim : 9

A computer input device for providing input information to a computer comprising a first pattern disposed on a first side of a substrate and a second pattern disposed on a second, different side of the substrate.

3. Claims: 13-15,38,40

A computer input system (and corresponding method) for providing input information to a computer, the system comprising a computer input device and first and second patterns disposed on a surface in which the computer input device issues a command to an application running on the computer based on the patterns, the command being indicative of a log on command and user authentication information.

4. Claims: 30-34, 41-45

A data structure passed from a computer pointing device to a computer (and corresponding input device), the data structure comprising three data portions indicative respectively of movement of the pointing device relative to a surface, of actuation of an actuation button and of a predetermined image detected on the surface.
